Health & Risk Update

Granular offers a dedicated and experienced team that leverages claims insights to provide an active second set of eyes for our clients to identify opportunities to collaborate for cost containment, improved clinical outcomes, ecosystem optimization and precision partnerships:

We continue our commitment to enabling cost and quality of care to our employers. When a member with ulcerative colitis and no complications was travelling several miles to a multi-campus medical clinic, our dedicated clinical team arranged the same treatment in a home setting with an annual cost of care savings of \$216K.

Granular scores ecosystem partners. Hines has continued to earn five stars because of their outstanding performance in reducing length of stay by facilitating early discharge of our members and strong alignment with Granular's mission to deliver patient outcomes at sustainable costs. The Granular Ecosystem Scorecard provides consultants and employer groups an actionable way to earn longer-term financial predictability in the form of multi-year rate caps.

As of today, Granular has vetted over 221 ecosystem partner functions, with 17 more under review. We continue to hone our value-driven assessment of the ecosystem partners services for driving precision care and precision health.
